CHECKLIST OF ANIMALS IN THE
CENTRE FOR THAI NATIONAL REFERENCE COLLECTIONS (CTNRC)
OF THE APPLIED SCIENTIFIC RESEARCH CORPORATION OF THAILAND

By CTNRC staff* .

INTRODUCTION

This is the first complete checklist ever published by the Centre for Thai National Reference Collections (CTNRC) since its establishment 5 years ago. Errors are inevitable but, it is hoped, will not be many. Much of the identification was made by visiting experts, whose errors, if any, will be few. The rest of the identification was made by our staff whose experience is limited.

At present the main collections are:

1) The Unesco Training Course Collection.

This collection consists of various kinds of marine animals collected by students while on a Unesco sponsored training programme some ten years ago. Approximately 100 species of common marine fishes, several species of marine mollusks mainly univalves and bivalves, and other invertebrates are in the collection.

2) The SEATO Collection of Small Mammals and Birds.

Representatives of many small mammals and birds were donated by the SEATO Medical Research Laboratory through the courtesy of Dr. D.J. Gould and Dr. Joe T. Marshall.

*Prasert Lohavanijaya, Kitti Thonglongya, Lakhana Boonliang, Sukhum Pongsapipatana, Suphachai Sittilert, Sunee Krutanut, Vasana Sukapanpotharam, Thavewat Polpukdee, Nivet Nadee, Preecha Luecha, Preecha Noonpukdi, and Upsorn Kawomporn.

3) The Paul Soderberg and Geoffery Young Collection.

During 1965 - 1966, some 3500 specimens of amphibians and reptiles representing 150 or so species were donated to the Centre. This group of animals, particularly the snakes, is one of the best collections in the country.

4) The George Vanderbilt Collection of Fishes.

These are fishes collected during the Naga Expedition to Thailand in 1959 - 61. The collections were later in custody of the California Academy of Science who had agreed to send identified representative specimens for deposition in CTNRC. The first batch of these, 159 specimens representing 86 species of fishes, have arrived. Other specimens will come later after they will have been studied by experts.

5) The Collection of Amphibians and Reptiles from the Field Museum of Natural History.

This is a collection made by Dr. Robert F. Inger and his team in 1969 mainly in the dry-evergreen forest at Sakaerat, Amphoe Pak Thong Chai, Changwat Nakhon Ratchasima. The collection consists of some 100 species of amphibians and reptiles.

6) The Collection of Primates from the Field Museum of Natural History.

The collection was made by Dr. Jack Fooden in 1966. There are 15 specimens in the collection representing 9 species of primates.

7) The Rolf A.M. Brandt Collection of Mollusks.

The collection was made by Dr. Brandt and his team. It is composed of some 60 species of freshwater mollusks.

8) Collection from CTNRC expeditions.

Many short expeditions were made during the past five years both on land and in the sea. The collection includes various taxa of animals from invertebrates to mammals.

Attempts were made to identify specimens to the lowest taxonomic rank as possible, but due to our limited manpower and taxonomic difficulties, some groups of animals, particularly insects, were identified to family level only.

We hope that this checklist will be a guide to biologists who are interested in the Thai fauna. Specimens in our collections, we hope, will serve, at least in the initial stage, toward research in both pure and applied biology.

This checklist includes 1326 species of animals found in Thailand. This number is composed of 107 mammals, 386 birds, 146 reptiles, 52 amphibians, 240 fishes, 111 crabs, 66 mollusks, and 218 insects. Common names, when known, are given both in Thai and English.

We wish to thank the following biologists for their help in identification and for their donations of specimens: Dr. Jack Fooden, Karl J. Frogner, Dr. D.J. Gould, Dr. W. Ronald Heyer, Dr. Robert F. Inger, the late C.J.P. Ionides, Prayoon Kananulak, J.H.E. Leakey, Dr. Boonsong Lekakul, Dr. Joe T. Marshall, Dr. Louis M. Roth, Dr. R. Serene, and Paul Soderberg, and also those others who donated a few specimens of various taxa.

Thanks are due also to the Governor of ASRCT, Mr. Insee Chandrastitya, the Research Director-General of ASRCT, Dr. Pradisth Cheosakul, and the former UNIDO Adviser, Mr. Frank G. Nicholls for their support and encouragement.
